DETAILED ACTION

Status of the Application

Drawings

The drawings submitted on 03/29/2005 are accepted.

Allowable Subject Matter

1. Claims 1-2, 4-9, 11-16, and 18-21 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter.

The prior art, Suguro (US 2006/0026072), teaches a safety stock amount calculation method includes calculating a probability that a delivery time for a certain commodity required by a customer is shorter than its lead time; calculating an average value of a difference between the lead time and the customer's required delivery time when the lead time exceeds the customer's required delivery time; correcting an inventory adjustment period by using the average value; calculating a safety stock amount by the equation $SS = PB * K * (\sqrt{N} * F) * \sigma$ wherein SS is a safety stock, BP is a probability, K is a safety coefficient, N is an inventory adjustment period, and F is a shipment frequency.

The prior art, Sakuma et al (US 2004/0059649), teaches a safety stock control system is comprised of a demand prediction, an actual value calculating, a predicted remainder calculating, a parameter calculating, and a safety stock calculating means for calculating safety stock based upon a parameter calculated by the parameter calculating means .

Suguro and Sakuma lack calculating a basic stock using a predetermined formula from said classified normal accepted order, wherein said calculating the basic stock using the predetermined formula comprises: calculating an order point "r" and the basic stock β using following equations:

$$r = cz + m\sigma\sqrt{c}$$

$$\beta = r + tz$$

where "z" signifies an average shipping quantity per day of an order lot, having a delivery time within a period from the basic time to "a" days after, of said normal accepted order lot(s), "c" represents the restock lead time, "t" is an order differential time delay, "m" is equal to or greater than 1, σ signifies a standard deviation of shipping quantities per day of order lots accepted, having a delivery time within a period from "b" days before to the basic time, of said normal accepted order lot(s);

when $d + e \leq r$, where "d" signifies a present amount of a stock and "e" represents a quantities on order, calculating a required order quantity "f" using an equation $f = \beta - (d + e - cz)$.

The limitations lacking in the prior art, in combination with the other limitations clearly claimed for patent, are novel and unobvious.

A Foreign prior art and a NPL search was conducted however no relevant prior art was found.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "comments on statement of reasons for allowance".
